April 2021

Dear Landowner:

Portland Pipe Line Corporation (PPLC) will be embarking on our 2021 fieldwork program to meet federal regulations and/or to improve the operational integrity of our pipeline systems. In order to complete this work, we may be required to access the PPLC right-of-way on your property and joining properties. Access to the right-of-way may be required for the following categories of work:

- Machine and hand cutting to control vegetation and maintain along the pipeline right-of-way will extend from Route 16 in Gorham, New Hampshire, to the Victory Rd crossing on the Victory and Burke, Vermont, town line. This work will finish in the fall of 2021. Towns included along this section of right-of-way where the work is expected to occur include Gorham, Randolph, Jefferson and Lancaster, New Hampshire, as well as Lunenburg, Guildhall, Granby, and Victory, Vermont.
- Pipeline close interval surveys will involve pipeline representatives walking the right-of-way and placing a thin wire along the ground, taking readings, with additional personnel walking behind them retrieving the wire. The wire will be on the ground temporarily, generally for a few hours, and we ask that you do not disturb the wire during their work. The survey work will extend from the Crooked River in Harrison, Maine, to Route 16 in Gorham, New Hampshire, during the spring of 2021. Towns included along this section of right-of-way where the work is expected to occur include Harrison, Waterford, South Oxford, Bethel and Gilead, Maine, as well as Shelburne and Gorham, New Hampshire.
- External pipeline inspection program will consist of excavation digs on the pipeline to verify pipeline conditions. This work will require backhoe and heavy equipment use during excavation. Work will be conducted as necessary during the year.
- Pipeline Markers and other signage to indicate the location of the pipelines as well as other required identifying information will be replaced, repaired and installed along the entire pipeline right-of-way. This work generally requires shovels and will be conducted as necessary during the year to maintain regulatory compliance and ensure the pipeline is properly marked.
- Throughout the year at various times and locations, right-of-way inspections may be performed.

As a landowner, you are very important to PPLC in the safe and secure operation of our pipelines. We will make every effort to contact you before accessing your property. If you have concerns, questions, or notice suspicious activity on the right-of-way please contact me directly at the phone number or email listed above. Our 24-hour emergency phone number is 1-866-253-7351.

Best Regards,

Nicholas D. Payeur
